

We build software around your business.

Web. Mobile. Custom software. AI.

Turn the way your business works into software that helps it move forward. We design, build and connect the systems your customers and team rely on.

ONE TEAM, FROM THE FIRST QUESTION TO HANDOVER

**Understand the work.
Build what matters.
Keep improving.**

Led by our founders in Zagreb, Croatia.
Direct conversations with the people doing the work.

OUR EXPERTISE

Four areas of work. One connected team.

From customer-facing experiences to the systems behind them, we shape the solution around your business and the people using it.

01 **Web development** →

Websites, customer portals and web applications that make information and everyday tasks easier to access.

[React](#), [Next.js](#), [TypeScript](#), [Node.js](#)

02 **Mobile app development** →

Customer and staff apps built for the tasks, device features and integrations your users need.

[Swift](#), [Kotlin](#), [Flutter](#), [React Native](#)

03 **Custom software** →

Internal tools, operational workflows and integrations that connect your systems and reduce repetitive manual work.

[Node.js](#), [TypeScript](#), [PostgreSQL](#), [MongoDB](#)

04 **AI integration** →

Assistants, automation and prediction tools for clearly defined tasks, with evaluation and human oversight built into the plan.

[LangGraph](#), [LiteLLM](#), [APIs](#) and your business data

HOW WE WORK

Clarity at every stage. Software you can own.

Understand the problem, agree the plan, review working software and launch with a practical handover.

01 **Discover** 1-2 weeks

Map the current work, agree the outcome and define a useful first release. You receive a written scope, priorities and an estimate.

02 **Plan & design** 1-2 weeks

Make the solution concrete through user flows, architecture and wireframes or a prototype. Agree milestones and launch checks.

03 **Build & integrate** 2-4 weeks

Review working software at each agreed delivery cycle. We test critical workflows, connect your systems and document progress.

04 **Launch, support & improve** 1-2 weeks

Complete the agreed release checks, rollout and handover. Confirm ownership, account access and ongoing responsibilities.

Planning example: 5-10 weeks for a focused first portal, internal workflow or AI automation. Scope, available inputs and dependencies determine the agreed schedule. Initial rollout and handover are included; ongoing support is agreed separately.

Your code. Your choice. You own the bespoke code we build, with project accounts in your name and documentation to support handover. Third-party software and services retain their own licences and terms.

Built on expertise. Committed for the long term.

Tomislav Lipovac

Co-Founder

Android engineering, dependable mobile experiences and maintainable code. Tomislav turns business requirements into practical applications that can evolve with your needs.

Antonio Šamuga

Co-Founder

Professional full-stack engineering since 2013. Antonio brings deep expertise in backend architecture, DevOps, AI integration and scalable systems for high-traffic environments.

We care about the work we put our names to. We want its quality, and the way we work with you, to earn your trust and give you a reason to choose us again.
